

Excursion Program

Go behind the scenes with industry professionals and qualified teachers

Take your students on a free behind the scenes excursion with industry professionals and qualified teachers to see how we manage water for 4.7 million people who live in Sydney, the Illawarra and the Blue Mountains.

Excursion programs

You and your students can see first hand how we make water safe for us and the environment.

We offer free excursions to water filtration, wastewater treatment or water recycling plants for students years 7 to 12.

At selected sites we offer syllabus linked and supported science and geography excursions.

Science excursions

See first hand the operations and technology used in the treatment processes. Our HSC Chemistry, HSC Earth and Environmental Science, Senior Science and general secondary science programs are available at selected sites.

Geography excursions

Students learn about wastewater treatment and water recycling and investigate how Australia's biggest water utility manages water for liveability.

Excursion program feedback

'A very worthwhile excursion – tour supported syllabus dot points and reinforced knowledge for relevant assessment tasks.'

'Worksheets that supplemented the tour are great. Provided a reference and overview of the process as they toured the plant.'

HSC Chemistry teacher preview feedback

'I can't wait to book my students. Wish I had done it last year! Very friendly staff.'

The program 'gives us a clear understanding of the Stage 6 HSC Chem content.'
