

Blue Wren population mysteriously declines in Sack Ville

A massive drop in Blue Wren numbers gets the people of Sackville worried. Some locals suspect that faults in Sackville's plumbing may be the reason for the tragedy as leakage from pipes could be poisonous to the majestic birds.

The Mystery of the Blue Wren Continues

As the sight of the Blue Wren in Sackville becomes very rare more and more theories and assumptions are popping up. Scientists suggest that chemical from rusty, old fences that were established in the nineteenth hundreds. Poisonous toxins from the rust may have caused unhealthy and polluted air for the unfortunate Blue Wren.

Investigators try to find Clues Towards the Blue Wren Disappearances

"Only last week I was walking through the moist wilderness of Sackville with only one thought going around my head ; I need to solve the beautiful blue bird mystery, i need to solve the beautiful blue bird mystery when I saw something that could have been the key to the recreation of Sackvilles native birds"says jeff , one of the investigators on the strange case of Sackville.

"What I saw was two Indian minors fighting for some territory. Instantly an idea struck me, what if the Blue Wren weren't really dead but had been drive out of Sackville or in other words habitat rivalry. We think that the villain in this crime is in fact the Indian minor itself as it has already been the reason for the lack of crows and pigeons in the area.

Eco Biologists could have the Answer to the Blue Wren Crisis

N.S.W breeding facility have come to the aid of Sackville. Studies have shown that Blue Wren infact are very territorial birds and will fight for there homeland. Currently an anti-minor bird spray. But don't worry the effects don't harm the minor bird only drive them out of Sackville.
